2A - When mounted in accordance with the manufactures instruction, this switch gets a protection degree of IP 20.

2B - The switch is to be employed in an end use product providing an enclosure or insulating barrier that provides Reinforced or Double Insulation over the front and rear switch enclosure Surfaces.

2C - The switch is considered for without any accessible parts to the user.

3A - The Switch body is installed inside of end product; consider the Button for accessible parts. When mounted in accordance with the manufactures instruction, this switch gets a protection degree of IP 40.

3B - The switch is to be employed in an end use product providing an enclosure or insulating barrier that provides Reinforced or Double Insulation over the front and rear switch enclosure Surfaces.

A - The tabs of Series KW01 are only evaluated for connection via hand soldering by a soldering iron at 350 C with 1.5 mm2 stranded conductors, and solder bath at 235 C.

A1 - It is a voltage selector switch. The investigation was limited to Mechanical cycles and current conducting capability. This switch should not be used to Make or Break any load and are not to be evaluated for Make and Break capabilities in the end product.

A2 - The switch has been subjected to a minimum 6,050 cycles Mechanical Endurance Test with no load in lieu of the normal Overload/Endurance test. This Switch should not be operated under load in the end-product

Note A - UL61058-1 - The tabs of Series KW01 are only evaluated for connection via hand soldering by a soldering iron at 350 C with 1.5 mm2 stranded conductors, and solder bath at 235 C.

Marking: Company name or tradename "BEJ" or trademark , catalog, model or part number, electrical ratings and Recognized Component Mark, on the product or on the smallest unit container in which the product is packaged.
